

## SUPPLY CHAIN MANAGER - MODIG MACHINE TOOL (Kalmar, Sweden)

---

Modig Machine Tool is a company that manufactures high-tech, high-quality machines for mainly the aerospace and automotive industries. Modig is an expansive and innovative company operating in a global market.

Modig Machine Tool faces a major global expansion. To succeed growing in a fast but stable way, we are now looking for a Supply Chain Manager.

Do you want to join us on in our exciting growth journey?

We offer an assignment that covers the entire chain from purchasing, production planning, warehouse/inventory to the shipping. The role is new and challenging, the work is independent with the ability to impact the content of the position. You will be responsible for a department which consist of four (4) direct reports and all together ten (10) committed team members. The Supply Chain Manager will be part of the management group.

The work will be varied with several contacts in an international business environment. You will create well defined plans and carry it out together with your team to ensure you meet delivery times and defined objectives within the budget. You understand that risk management is necessary dealing with unexpected and changed circumstances.

Our expansion requires high demands on leadership and creating the right conditions for our employees to further develop and grow. Part of the job will be to lead the procurement function and its further development, to source and develop our suppliers and partners. Ensure efficiency and reduce costs on the purchasing and inventory side. You will also organize and establish methods and structures in planning. Optimizing the flow and inventory in our current two warehouses is critical for a smooth and stable execution of our projects. With a strong customer focus along with a both operational and strategic work you will have the right prerequisites to be successful together with the whole Modig team.

### **Supply Chain Manager requirements:**

- University degree of Master of Science in Business and Economics or in related field
- 5-10 years broad experience within Supply Chain from a global technical manufacturing environment
- > 5 years of experience in a Manager position
- Excellent communication and leadership skills
- Profound analytics and strategical planning skills
- Result driven and quality oriented
- Comfortable working with ERP system and Microsoft applications
- Very good verbal and written communication skills in English
